

Annual International Training Course (AITC) 2023

The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

24 April – 5 May 2023

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Lecture 7_27 April 2023

Production of osmotic dehydration fruits using a solar dryer and a tray dryer

Asst. Prof. Dr. Busarakorn Mahayothee

Department of Food Technology

Faculty of Engineering and Industrial Technology

Silpakorn University, Nakhon Prathom

Thailand

Email: busarakornm@yahoo.com

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of dried tomato

Osmotic dehydration

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

General Process of osmotic dehydrated Products

Raw materials: Fruits

Raw materials preparations: Selection, Cleaning, Washing, Sanitization, Peeling, Trimming, Slicing,

Pretreatment: dipping in pretreatment solution such as calcium chloride, acid and or sulfiting agents, blanching and sugaring by dipping fruit slices into osmotic solution

Drying or Dehydration: Greenhouse Solar dryer or tray dryer

Osmotic dehydrated Products

Packaging and Storage

TICA
Thailand International
Cooperation Agency

80th Anniversary
SILPAKORN UNIVERSITY

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

lychee in sugar solution

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydrated fruits

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydrated fruits

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydrated fruits

Soft Dried

Osmotic Dehydration

Dehydrated

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydrated fruits

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Sulfite agents

Sulphur dioxide

Sodium sulphite

Sodium bisulphite

Sodium metabisulphite

Potassium metabisulphite

Potassium bisulphite

Potassium sulphite

No SO₂

with
SO₂

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

Papaya - lycopene pigment (red color of flesh)

Raw materials selection

- optimum variety - optimum maturity

Ripening

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

Processing steps

Washing/ Peeling

Cutting/ Deseeding

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

Processing steps

Cutting in cube

Dipping in mixed solution of calcium chloride and malic acid

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

Processing steps

Blanching

Dipping in mixed solution of sugar and malic acid

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Osmotic dehydration

Processing steps

Drying in a Tray Dryer

Osmotic dehydrated air dried Product

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of osmotic dehydrated mango

Processing steps

Matured mango at optimum ripening

Peeling

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of osmotic dehydrated mango

Processing steps

Slicing

CaCl_2 + Acid pretreatment

Blanching

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of osmotic dehydrated mango

Processing steps

Immerse in osmotic solution
(sugar solution)

Osmotic dehydrated slices

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of osmotic dehydrated mango

Processing steps

Drying using a conventional tray dryer or a greenhouse solar dryer

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Production of osmotic dehydrated mango

Major quality criteria impact on quality of osmotic dehydrated product:

Total sugar/Reducing sugar ratio (TS/RS) of osmotic dehydrated mango slices after sugar immersion and prior to the drying process

Sucrose + fructose + glucose (TS)

Fructose + glucose (RS)

TS/RS ratio

Moisture content 12-15%

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated mango

Total sugar/Reducing sugar Ratio (TS/RS)

Too high TS/RS ratio, the product will get the thin white sugar crystal on the surface and the texture of product will be hard

Too low TS/RS ratio, the product will get more sticky and drying time increase

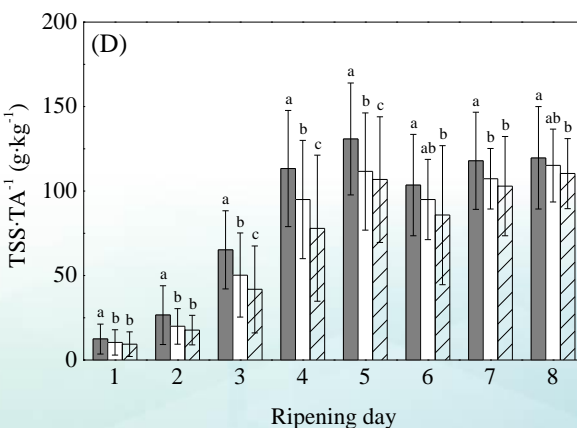

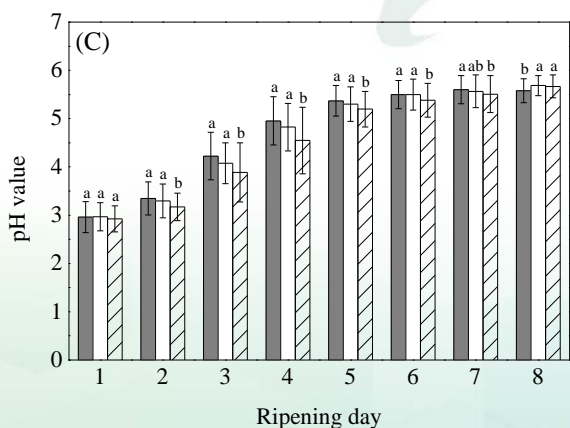

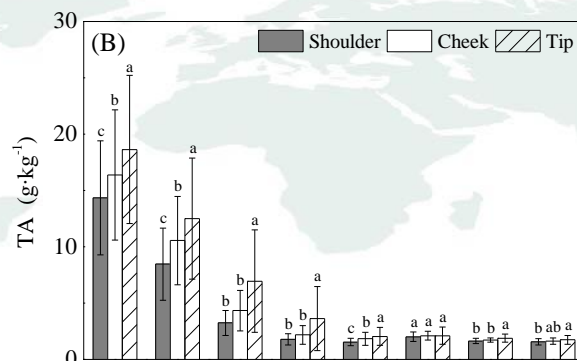

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated mango

TS/RS ratio

Sucrose + fructose + glucose (TS)

Fructose + glucose (RS)

TSS, TA, pH and TSS/TA of Mango cv. Golden Nam DokMai during Ripening

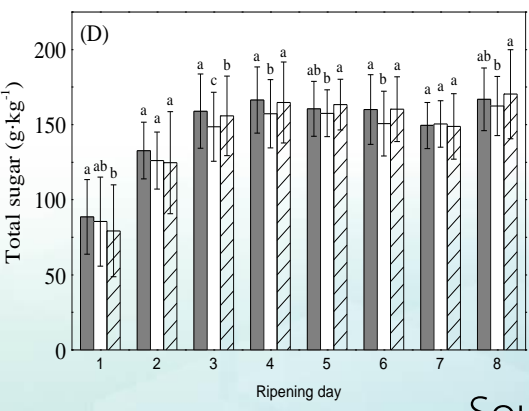

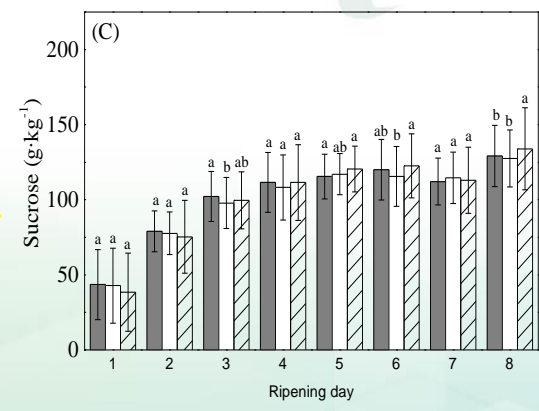

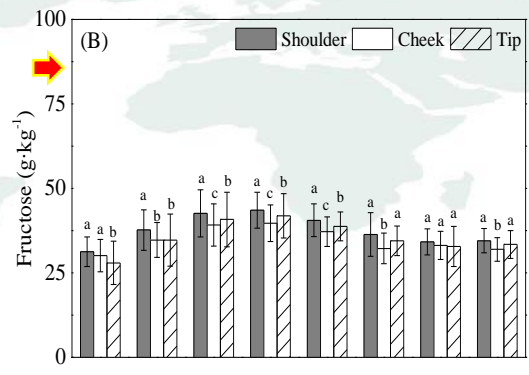

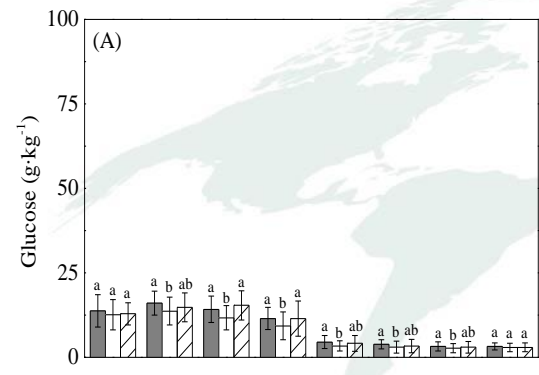

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated mango

D1 D2 D3 D4 D5 D6 D7 D8

Glucose, fructose, sucrose and total sugar of Mango cv. Golden Nam DokMai during Ripening

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated mango

Factor effect on the TS/RS ratio

- pH of the osmotic solution
- Type of sugar used for preparing osmotic solution (OS)
- Concentration of reducing sugar in OS
- Blanching temperature and time
- Amount of acid and the step for adding acid into the OS

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits contain anthocyanins

Impact of adding sulfiting agent

Strawberry - anthocyanin pigment (red color)

No Potassium metabisulfite (KMS)

+ KMS 400 ppm

fruit juice

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits contain anthocyanins

Fresh mulberry

Osmotic dehydrated mulberry

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits contain anthocyanins

Mulberry

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits contain anthocyanins

Mulberry

Without osmotic dehydration pretreatment

With osmotic dehydration pretreatment

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits contain anthocyanins

Osmotic dehydrated mulberry

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products

Factors influencing the quality and shelf-life of osmotic dehydrated fruits

Degree of ripeness

AITC course 2023 : The application of a parabolic greenhouse solar dryer together with raw material preparation techniques to extend shelf-life and enhance quality of agricultural products
